

LASER HAIR REMOVAL

HAIR-FREE SKIN FOR MONTHS OR EVEN YEARS AT A STRETCH!

**808nm Wavelength Diode Laser
CE Medical Approved Device
Safely Treats All Skin Types**

Hair grows in 3 phases. Laser can only treat the hair within one of these phases called anagen. This is when the hair is growing and there are actively dividing cells in the hair follicle.

At any given time, there is only a certain percentage of hair in anagen. This is why all lasers must be performed over a number of sessions with a certain time span between treatments to achieve the best result.

However, we can only achieve approximately 70% to 90% hair reduction, no laser system can achieve 100% hair removal though what is remaining is generally lighter and finer.

The number of sessions required depends on your hair and skin colour and how your body responds to the treatments.

**Make sure that you disclose the following before your appointment:
ANY medical conditions that you have
ANY medication/s that you're taking**

IMPORTANT:

Hair may only be removed by shaving throughout the epilation course.

Pre-Treatment Care

Please shave the area to be treated 1 day prior to your treatment (do not use tweezers or wax for 4 weeks prior to treatment.)

FIR SAUNA BLANKET

Burns up to 600 calories in 30min!

DID YOU KNOW? Approximately 50% of the energy generated by your own body is in the form of FIR rays. So FIR is completely safe.

Unlike Ultraviolet light, FIR rays do not cause sunburn or damage to your skin.

FIR energy can permeate deeply into the body. Its effects reach the skin, muscles, tendons, and ligaments.

A FIR sauna blanket transforms from light energy to heat energy, thus warming your body from the inside out without warming the air around you.

During your 30min session, the controlled, timed heat promotes the elimination of fats, chemicals and toxins from the blood through sweating and through the liver, kidneys.

ULTRASONIC CAVITATION

Reduces Fat & Cellulite | Firms & Tightens Skin | Body-Shaping | Anti-Ageing

Ultrasonic cavitation is a non-surgical body contouring treatment that uses radio frequency and low-frequency ultrasonic waves to reduce localized fat and cellulite. This procedure is a safer alternative to surgical options, like liposuction. It is important to note that the fat could return if you consume a high-calorie diet.

Benefits:

- **Painless**
- **Fat reduction**
- **Reduces the appearance of cellulite**
- **Skin tightening and toning**
- **Body shaping and contouring**
- **Non-invasive**
- **No downtime**
- **No recovery time**
- **No side effects**
- **No scars**
- **No anesthesia**

Ultrasonic cavitation works best on parts with localized fat and cellulite.

- stomach
- buttocks
- hips
- thighs
- upper arms
- flanks (love handles)

SLIMMING TREATMENTS

30K ULTRASONIC CAVITATION

How does it work?

This procedure involves applying pressure on fat cells through ultrasonic waves. These waves form bubbles around fat deposits under the skin. The pressure is high enough to make the fat cells burst and break down into a liquid form. The fat deposits are changed into glycerol and free fatty acids. Glycerol is then reused by the body while free fatty acids travel to the liver and are excreted as waste.
